Preview Main article: Test screening A preview performance refers to a showing of a film to a select audience, usually for the purposes of corporate promotions, before the public film premiere itself. Previews are sometimes used to judge audience reaction, which if unexpectedly negative, may result in recutting or even refilming certain sections based on the audience response. One example of a film that was changed after a negative response from the test screening is 1982s First Blood. After the test audience responded very negatively to the death of protagonist John Rambo, a Vietnam veteran, at the end of the film, the company wrote and re-shot a new ending in which the character survives.11

Technology See also: Cinematic techniques Film stock consists of transparent celluloid, acetate, or polyester base coated with an emulsion containing light-sensitive chemicals. Cellulose nitrate was the first type of film base used to record motion pictures, but due to its flammability was eventually replaced by safer materials. Stock widths and the film format for images on the reel have had a rich history, though most large commercial films are still shot on and distributed to theaters as 35 mm prints. Originally moving picture film was shot and projected at various speeds using hand-cranked cameras and projectors though 1000 frames per minute. frames is generally cited as a standard silent speed, research indicates most films were shot between 16 frames and 23 frames and projected from 18 frames on up often reels included instructions on how fast each scene should be shown.13 When sound film was introduced in the late 1920s, a constant speed was required for the sound head. 24 frames per second were chosen because it was the slowest and thus cheapest speed which allowed for sufficient sound quality.citation needed Improvements since the late 19th century include the mechanization of cameras – allowing them to record at a consistent speed, quiet camera design – allowing sound recorded on-set to be usable without requiring large blimps to encase the camera, the invention of more sophisticated filmstocks and lenses, allowing directors to film in increasingly dim conditions, and the development of synchronized sound, allowing sound to be recorded at exactly the same speed as its corresponding action. The soundtrack can be recorded separately from shooting the film,

but for live-action pictures, many parts of the soundtrack are usually recorded simultaneously.

On May 3, 2021, the governors of Connecticut, New Jersey, and New York jointly announced that they planned to lift most capacity restrictions on businesses on May 19 for cinemas in New York, they would not be limited in how many patrons may be present, but there must be 6 feet 1.8 m social distancing between groups.209210 On May 4, Los Angeles County was moved to yellow Minimal tier by state health officials,211 but the LACDPH did not allow cinemas to use the 75% option.212 Due to progress on vaccination, New York and California lifted capacity restrictions, including those on cinemas, in June 2021.213214 By August 2021, however, due to spread of Delta variant and waning vaccination rates nationwide, New York City where only 55% of residents were fully-vaccinated announced on August 3 that effective September 13, access to indoor entertainment venues including cinemas will be restricted to those who are vaccinated.215216 In October 2021, Los Angeles announced that starting November 4 residents will be required to show proof of a COVID-19 vaccination to enter movie theaters.217
